Readability

Your code is very readable. Dividing it into those many files makes each one shorter, and thus simpler to understand. The headers for each class also give useful information.

Structure

While dividing your code into so many files does make it easier to read, I'm not sure if so many of these files are necessary. For example, conf.lua is only 4 lines long.

Style

Your code style is consistent and good.

Suggestions

Your program is very good. I only have a few minor suggestions for improvement.
The conf.lua file is very small. Unless there is a good reason it is kept as a separate file, I think it's fine to pull that code to main.
I think you can easily implement the Undo button for extra credit. You already have the button figured out, you just need somewhere to keep track of the moves done by the player, some sort of record table.
Remember to delete the wordier comments before turning this in.

Conclusion

You are basically done with the project. You could turn this in as-is for a good grade, which means you have some time to chase those extra credit points if you wanted.
